

Saurabh Dindokar

AWS DevOps Engineer | Cloud Migration | Kubernetes | CI/CD | Production Operations

Pune, Maharashtra, India | +91 8983659327 | sirdindokar@gmail.com | AWS Certified Solutions Architect - Associate

PROFESSIONAL SUMMARY

AWS DevOps Engineer with 5 years of experience in cloud infrastructure, CI/CD, Kubernetes, containerization, infrastructure automation, monitoring, backup planning, production support, and operational documentation. Hands-on experience with AWS EKS, ECS/Fargate, EC2, S3, IAM, VPC, CloudWatch, CloudFormation, ECR, Route 53, ALB, SSM, Jenkins, Docker, Kubernetes, Terraform, Ansible, Nginx, Linux, Windows Server, IIS, and release automation. Recognized in November 2025 as Best Performer of the Team, Best Mentor of the Year, and Best Team Lead for delivery ownership, team guidance, and leadership across DevOps workstreams.

CAREER ACHIEVEMENTS

Recognized as **Best Performer of the Team** in November 2025 for consistent ownership across AWS migration, DevOps automation, documentation, and production support workstreams.

Recognized as **Best Mentor of the Year** in November 2025 for mentoring junior team members/interns, preparing learning material, assigning structured DevOps tasks, and improving team confidence.

Recognized as **Best Team Lead** in November 2025 for coordinating DevOps activities, aligning project documentation, supporting delivery planning, and maintaining clear communication across teams.

- Improved Kubernetes workload stability by standardizing health-check endpoints/files across Scala, Node.js, Angular, and Java services and configuring liveness/readiness probes.
- Created reusable deployment runbooks, workflow diagrams, rollback notes, monitoring guides, backup/restore procedures, DR documentation, and production handover material.

TECHNICAL SKILLS

AWS Cloud: EC2, ECS, EKS, ECR, S3, IAM, VPC, EBS, EFS, ALB, Route 53, ACM, CloudWatch, CloudFormation, SSM, SNS, WAF, Secrets Manager, KMS, CloudFront, Global Accelerator

DevOps and CI/CD: Jenkins, AWS CodeBuild, AWS CodePipeline, GitHub Actions, Bitbucket Pipelines, Git, GitHub, GitLab, Maven, SonarQube, Nexus, Groovy, release automation

Containers: Docker, Dockerfile, Docker Hub, Amazon ECR, Kubernetes, Amazon EKS, Amazon ECS/Fargate, Helm, ArgoCD, ALB ingress, liveness probes, readiness probes

Automation: Terraform, Ansible, CloudFormation, YAML, JSON, Bash, Shell scripting, PowerShell, Linux, Windows Server, IIS, Nginx, systemd, PM2

Monitoring and Data: CloudWatch, Prometheus, Grafana, Nagios, ELK/Elasticsearch, RDS SQL Server, RDS MySQL, RDS PostgreSQL, DocumentDB, MongoDB, Redis, Kafka, Zookeeper

PROFESSIONAL EXPERIENCE

AWS DevOps Engineer | Ficode Technologies May 2024 - Present

- Delivered AWS DevOps implementation across multiple platforms using EKS, ECS/Fargate, EC2, S3, IAM, VPC, CloudFormation, ECR, ALB, Route 53, CloudWatch, SSM, Jenkins, Docker, Kubernetes, and Linux.
- Supported AWS EKS migration for a large multi-service smart building management platform with Kubernetes manifests, ECR image flow, ALB ingress, AWS Load Balancer Controller, EBS CSI driver, gp3 storage class, ArgoCD, Jenkins/Nexus, and CloudWatch.
- Added and documented health-check endpoints/files across Scala, Node.js, Angular, and Java services; configured Kubernetes liveness and readiness probes to improve pod restart behavior, traffic readiness, and rollout stability.
- Supported Jenkins deployment modernization by moving services toward managed execution with systemd/PM2 patterns, release directories, rollback notes, service validation checks, and operational runbooks.

- Prepared AWS ECS/Fargate modernization and cloud operations documentation covering ECS, ECR, ALB/NLB, S3, CloudFront, Route 53, WAF, Secrets Manager, DocumentDB, RDS PostgreSQL, Redis/ElastiCache, CloudWatch, and DR planning.
- Helped validate Linux-first AWS deployment automation for a membership SaaS platform using Jenkins, CloudFormation, S3 artifacts, SSM, EC2 Linux, Nginx, ASP.NET Core, systemd, RDS SQL Server, RDS MySQL, CloudFront, and Route 53.
- Prepared Terraform-based AWS deployment planning for an enterprise automation platform using EC2, private RDS MySQL, S3 document storage, IAM roles, security groups, Nginx, FastAPI, React, Docker Compose/systemd, and Bitbucket pipeline examples.

AWS DevOps Engineer | IFS India Mercantile Pvt. Ltd. January 2021 - May 2024

- Managed CI/CD, cloud infrastructure, deployment automation, monitoring, logging, configuration management, and Linux administration for Dev, QA, and Stage environments.
- Installed, configured, and administered Jenkins CI on Linux; managed build jobs, deployment jobs, and Jenkins master-slave architecture to improve build performance and release execution.
- Provisioned AWS infrastructure using Terraform and supported configuration management using Ansible for package installation, application setup, configuration files, commands, and environment automation.
- Worked with AWS services including EC2, S3, EBS, EFS, ELB, IAM, Auto Scaling, EKS, and CloudWatch for cloud infrastructure and application support.
- Used Docker, Docker Registry, Docker Swarm, Kubernetes, and Helm for containerization, orchestration, microservice deployment, scaling, and log management.
- Built monitoring visibility using Prometheus, Grafana, Nagios, and ELK/Elasticsearch for application and infrastructure health checks.

SELECTED PROJECT EXPERIENCE

Smart Building Management Platform - AWS EKS Migration and Platform Stabilization

- Supported AWS EKS migration and production stabilization for a multi-service real-time platform using Kubernetes, Docker, ECR, ALB ingress, ArgoCD, Jenkins/Nexus, CloudWatch, Kafka, Elasticsearch, MongoDB, and mixed Linux/Windows workload planning.
- Standardized health-check behavior across Scala, Node.js, Angular, and Java services; configured liveness/readiness probes to reduce blind deployments and improve pod-level visibility.

IoT Healthcare Platform - ECS/Fargate Modernization and DR Readiness

- Prepared AWS managed-service migration documentation covering ECS/Fargate, ECR, ALB/NLB, S3, CloudFront, Route 53, DocumentDB, RDS PostgreSQL, Redis/ElastiCache, IAM, Secrets Manager, KMS, CloudWatch, and security operations.
- Documented active-passive DR approach with Global Accelerator traffic model, standby region planning, health validation, database promotion, failover/failback notes, and incident response flow.

Cloud-Based Membership Platform - AWS Deployment Automation

- Validated Linux-first AWS deployment POC with Jenkins, CloudFormation, EC2 Linux, S3 artifacts, SSM, Nginx, ASP.NET Core systemd services, RDS SQL Server, RDS MySQL, CloudFront, and Route 53.
- Supported Super Admin deployment, client deployment/redeployment, configuration sync, appsettings fixes, and health validation through Kestrel and Nginx.

Enterprise Automation Platform - AWS Infrastructure and Deployment Templates

- Prepared low-cost AWS deployment model using EC2, private RDS MySQL, S3 document bucket, IAM role, security groups, Nginx reverse proxy, FastAPI backend, React frontend, Docker Compose/systemd, and Bitbucket pipeline templates.

EDUCATION AND CERTIFICATION

AWS Certified Solutions Architect - Associate | Issued May 2025 | Expires May 2028

Master of Computer Application | GHRU Amravati University
Bachelor of Computer Application | SGBA University
