

POC 05: Fitness And Wellness Application - Windows IIS Deployment And Monitoring

Prepared for: **Saurabh Dindokar**
Role: **AWS DevOps Engineer**
Public-safe name: **Fitness And Wellness Application**

Confidentiality Note

This POC excludes private domains, server IPs, database credentials, internal deployment values, and client-specific screenshots.

POC Objective

Create a Windows/IIS deployment and monitoring blueprint for a mixed application stack with .NET hosting, WordPress hosting, database backup planning, CloudWatch dashboard setup, data transfer estimation, and production handover.

Deployment Architecture Diagram

What I Worked On

â€¢ Documented Windows server setup, IIS website setup, application pool configuration, .NET Core hosting, and WordPress hosting.

â€¢ Prepared CloudWatch dashboard setup documentation for Windows server monitoring.

â€¢ Documented database backup process and data transfer estimation.

â€¢ Supported reusable deployment planning using S3 artifact concepts, SSM/remote execution concepts, PowerShell, IIS, .NET, SQL Server/MySQL, PHP, and WordPress.

POC Implementation Scope

â€¢ Windows IIS deployment checklist.

â€¢ PowerShell deployment commands for dummy artifact copy and IIS restart.

â€¢ CloudWatch Agent installation and dashboard notes.

â€¢ Database backup and restore checklist.

â€¢ Production validation and rollback runbook.

Suggested Repository Structure

```
windows-iis-deployment-poc/  
|-- README.md  
|-- powershell/  
|   |-- deploy.ps1  
|   |-- rollback.ps1  
|   `-- health-check.ps1  
|-- docs/  
|   |-- iis-setup.md  
|   |-- cloudwatch-monitoring.md  
|   |-- database-backup.md  
|   `-- production-checklist.md  
`-- diagrams/  
    `-- architecture.mmd
```

Validation Steps

Validate IIS site and app pool setup steps.

Run PowerShell deployment script against a dummy folder structure.

Confirm service/site health after deployment.

Review CloudWatch Agent configuration.

Validate backup and rollback documentation.

Expected Outcome

- â€¢ Repeatable Windows/IIS deployment approach.
- â€¢ Clear monitoring and backup documentation.
- â€¢ Better production handover for Windows-hosted workloads.

Technologies

AWS EC2, Windows Server, IIS, CloudWatch, S3, SSM concepts, PowerShell, .NET Core, WordPress, SQL Server/MySQL, PHP.
